(A) This area is within a data gap that has not yet been surveyed.

(B) Goose Lake shoreline varies seasonally. The project and agencies have not decided on a final Ordinary High Water Mark (OHWM) for this waterbody. Consultations are on-going and more accurate (lidar) data is pending. OHWM and Goose Lake boundary likely to change.

***Fisheries Issues:**

1. Protected species (listed federal/state threatened or endangered)
2. Sensitive species, species of concern, other status (state or federal).
3. Salmonid spawning habitat near crossing
4. Primary migration route
5. Significant recreational fisheries regulations or considered high priority by state
6. Potential lamprey spawning grounds
7. Designated critical habitat or proposed critical habitat
8. Risk of sedimentation of downstream of protected species
